

ASX ANNOUNCEMENT

DATE: 12 October 2020

VIRTUS HEALTH LIMITED (ASX: VRT)

GENETIC TESTING UPDATE

Virtus Health (ASX "VRT") advises that:

Media reports distributed over the weekend in Australia stated a national IVF provider has suspended their non-invasive pre-implantation genetic screening, that had been in place since May 2019.

Virtus confirms that the non-invasive preimplantation screening technique in question has not been used at any of its clinics, this includes IVF Australia, Melbourne IVF, Queensland Fertility Group or TasIVF.

Virtus' clinics use the established world-wide genetic testing technique PGT-A test which has been validated by many leading assisted reproductive treatment centres around the world who have published their results in medical journals. Virtus has also participated in a multi-centre trial to validate the clinical effectiveness and role of genetic testing technique PGT-A test in assisted reproductive treatment.

Virtus further confirms our commitment to genetic testing; it will play an important role in fertility care in the future. Virtus Health's diagnostic, medical and scientific teams undertake rigorous and quality assured testing to ensure we are only providing the safest, most effective and validated services to our patients.

Authorised by the Board of Directors of Virtus.
